Work Completed

Much of the work completed this week was paperwork. The weekly report, final report, operator’s manual, and NSF report had to be completed. These four documents took endless hours and many pages of typing to complete. Jackie also was able to paint the entire easel this week and Jon and I discussed how to stabilize the easel face to reduce the effects of the somewhat flimsy aluminum.

Future Work

After this week’s work is done, we still need to put together our poster board and final presentation. We are also awaiting a delivery of 80/20 parts so that we can stabilize the easel face.

Project Review

Another big week full of long nights in the lab, but we are all set on time once again. It feels like every week is an episode of “Monster Garage” or “Overhaulin’” with the amount of time and the late nights we’re putting in, but I have enjoyed the process for the most part. Our group has worked well together the whole semester and everything has gone off without a hitch. However, I think I can speak for us all when I say that we’re ready for the long nights and busy weeks to be over!

Hours Worked

In-Lab Hours: 20 hours
Out of lab hours: 5 hours

Paperwork: 2 hours

*Total Time Spent:* 27 hours
