The University of Connecticut Biomedical Program Senior Design Lab is happy to present you this project. This device, designed and built with your input by three or more of our students is presented to you without warranties of any kind, and the faculty, staff and the student designer(s) specifically disclaim any liability for any incidental or consequential damages arising from the use of the project.

As part of the student’s requirements for completion of this project, an inspection of this project by the Senior Design Lab faculty and staff with respect to its durability and safety was performed. The device being presented to you has passed this inspection.

You, the person accepting this device, take full responsibility of the use, care, and operation of this device. The Senior Design Lab takes no responsibility for the device once it has been presented to you and installed and therefore removes itself from any liability or responsibility caused by any failure or miss-use of this device for any reason including operation of the device in situations where common sense dictates it not be used.

Repairs to this device are also not the responsibility of the BME Senior Design Lab. However, if the device fails, we may repair it as a future team project.

If these conditions set forth are unsatisfactory to the intended user, the device will be withdrawn before presentation and installation.
