**The s90 Go-Kart**  
Alexander Jadczak  
Weekly Report #4  
February 19, 2009

**Work done to the go-kart**  
This past week the remaining wires were routed through conduit. The conduits containing the major power lines are situated on either side of the seat, with the signal wires running along in separate conduits. There is space remaining in the left conduit for the remaining wires that will be going from the PCB to the front panel for speed display and for the remaining switches.

**Work to be done**  
Next week the front panel housing the gearbox switch, speed indicators, and the state selector button will be fabricated and the indicators and switches will be mounted.

**Work done this past week**  
10 hours
