James Paolino

Weekly Report 2

The S-90 Go-Kart

This week I worked on the steering and pedals stops as well as on a spring return system for both the pedals and the steering wheel. I also worked on some wiring and did some tests with Eric on how the electronics work while the engine is running. Also I made an adjustable kill switch that can be activated by the head of the client. Lastly, I also mounted the alternate seat bracket to the client’s child carseat. Figure 1 shows an image of the vehicle.
